## Crown NDVS

The Crown ND range of small change machines offers a range of configurations to suit most applications. It can be configured with note and, or coin acceptance. Payout of up to three denominations from high-speed hoppers. The note and coin changer is a compact and secure, combining style, functionality and reliability.

It is suitable for installation in a wide range of applications, such as hotels, hospitals, laundrettes, arcades and sports centres.

The Crown changer uses a secure note and coin reader, which combines high acceptance rates with excellent security. It is obtainable for most currencies and denomination. When a note or coin is accepted, the correct change is paid out into the large, ergonomic payout cup. Each transaction is recorded on non-resettable audit counters.

Any payout combination may be programmed by the operator using a simple teach system. Payout can be coins or tokens. The standard hopper can payout any denomination of coin between 18mm and 30mm diameter without adjustment. Special versions are available for smaller or larger sizes.

Hopper override switches allow easy emptying of the hoppers for auditing, when the number of coins dispensed are accurately counted and displayed on the LED display, making manual counting unnecessary.

With an all steel cabinet, five point locking and high security radial lock; the Crown cabinet offers maximum protection against forced entry. For high-risk areas, a security frame and burglar alarm may also be added.

One and two hopper machines include an extra large hopper extension.
