Payment Kiosks

The L9 mini kiosk is a compact payment portal, accepting both credit cards and coin payments. Where space is limited, the L9 can be wall or floor mounted and can still cope with a high workload. The ideal application is for sales of tickets and other revenue collection. It can handle a high volume of sales and increases security by removing access to cash by both the customer and the service provider. Remote management allows for integration into a wider payment network. Options to include barcode reading and contact-less cards can speed transactions and allow for other innovative sales promotions. This really is a payment solution that can increase your business, reduce staffing and cut costs.

Features

- 12in X VGA Touch screen for maximum flexibility
- PC control with network connection
- Remote monitoring and diagnostics
- Secure steel cabinet with 5 point locking
- High speed thermal printer with large paper roll
- Simple operation for users and operators
- Software development for bespoke applications
- Wall or floor mounting options
- Accepts coins for extra flexibility
